Adjusting Screen brightness on the Panasonic T8 Laptop

The Panasonic Toughbook T8 laptop allows you to adjust the screen brightness when on AC Power as well as when running on battery power alone. It is important to understand that the laptop will maintain the selected brightness settings separately while on AC Power or running on the Battery.

To increase the screen brightness while on AC power, simply hold down the Fn key plus the F2 key to increase brightness, or hold down the Fn key and F1 to decrease brightness. Once it is set at your desired level of brightness, the laptop will maintain this setting until you change it.

To increase the screen brightness while running on Battery power, simply hold down the Fn key plus the F2 key to increase brightness, or hold down the Fn key plus F1 to decrease screen brightness. Once it is set at your desired level of brightness, the laptop will maintain this setting until you change it.

You will see the following icon when you hold down the key combination to provide a visual reference to the brightness level:

Hint - By default, the Toughbook T8 sets the “on battery” display brightness at 75%. If you have trouble seeing your screen when running on battery power, turn the display up to full brightness.
